2 Product description

The standard **WREM 63**¹⁾ readers (125 kHz readers with WIEGAND data output) are designed for connection to controllers or WIEGAND interfaces of the **APS** access control systems or for general use. Readers feature configurable WIEGAND protocol data output, which is suitable for use in most of third party systems.

The reader module is designed both for outdoor and indoor use.

Pic. 1: WREM 63 BK reader

2.1 WREM 63 BK reader

The WREM 63 BK readers are delivered in installation boxes in matt black color (pic. 1).

2.2 WREM 63 GR reader

The WREM 63 GR readers are delivered in installation boxes in dark grey color (pic. 2).

Pic. 2: WREM 63 GR reader

¹⁾ Commercial designation of available versions is described in *table 1*.

3 Technical parameters

3.1 Product version

Product version	Product designation	Color	Catalogue number	Module features ²⁾	
				TF	EM
	WREM 63 BK	<i>Matt black</i>	51463001	✓	✓
	WREM 63 GR	<i>Dark grey</i>	51463201	✓	✓

Table 1: Product version

²⁾ **TF** – TECHFASS factory ID media reading; **EM** – EM Marin ID media reading;

3.2 Technical features

Technical features	Supply voltage		8 ÷ 15 VDC	
	Current demand	Typical	65 mA	
		Maximal	80 mA	
	Version with keypad		N/A	
	ID technology, typical reading range	EM Marin		8 cm (with ISO card)
		Cards		748 ID, 2 programming cards
	Memory	Time schedules		64
	Inputs			1x buzzer control 1x yellow / green LED control
	Outputs			1x tamper (OC)
	Indicators			3x LED 1x PIEZO
	Tamper protection	Against tearing-off		Reed contact
		Opening the cover		Opto-electronic
Data output			WIEGAND (configurable without SW)	

Table 2: Technical features

3.3 Special accessories

MAG	51900200	Magnet for reed contact
-----	----------	-------------------------

Table 3: Special accessories

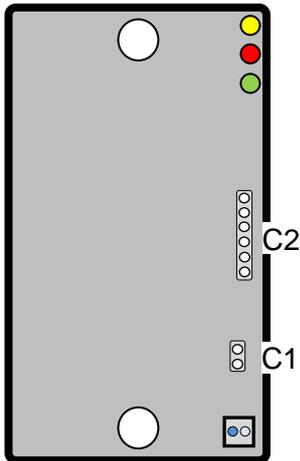

3.4 Mechanical design

Mechanical design	Weight		0.15 kg	
	Operating Temperature		-25 ÷ 60 °C	
	Humidity		Max 95%, non-condensing	
	Housing		IP 54	
	Pigtail		0.5 m	
	Color	WREM 63 BK		Matt black
		WREM 63 GR		Dark grey
	Dimensions			55x90x25 mm

Table 4: Mechanical design

4 Installation

4.1 Connectors description

Connectors	Connector	Purpose
	C1	Connector for configuration device connection
	C2	Service connector

Table 5: Connectors description

Pic. 3: Reader connectors

4.2 Wiring description

Wiring description	Color	Meaning
	Pink	+ 8 ÷ + 15 VDC
	Blue	0 V
	Green	WIEGAND data 0
	White	WIEGAND data 1
	Brown	Yellow / green LED control, 0 V active
	Yellow	Buzzer control, 0 V active
	Grey	Low power transistor output (+5 V in any alarm state)

Table 6: Wiring description

4.3 Indicators description

Indication	Indicator	Description
	Red LED	Reader powered
	Green LED	ID media reading, can be controlled by the input status (0V = active)
	Yellow LED	Can be controlled by the input status (0V = active)
	Buzzer	Controlled by the input status (0V = active)

Table 7: Indicators description

4.4 Installation instructions

The reader module uses passive RF/ID technology, which is sensitive to RF noise sources. Noise sources are generally of two types: radiating or conducting.

Conducted noise enters the reader via wires from the power supply or the host. Sometimes, switching power supplies generate enough noise to cause reader malfunction, it is recommended to use linear system power supplies.

Radiated noise is transmitted through the air. It can be caused by computer monitors or other electrical equipment generating electromagnetic fields.

Consequently, a short distance between the reader modules themselves can cause reading malfunctions – for correct operation it is necessary to keep a minimum distance of 50 cm. Various metallic constructions may have a negative influence on this distance; if there are any doubts, it is recommended to perform a practical test before final mounting.

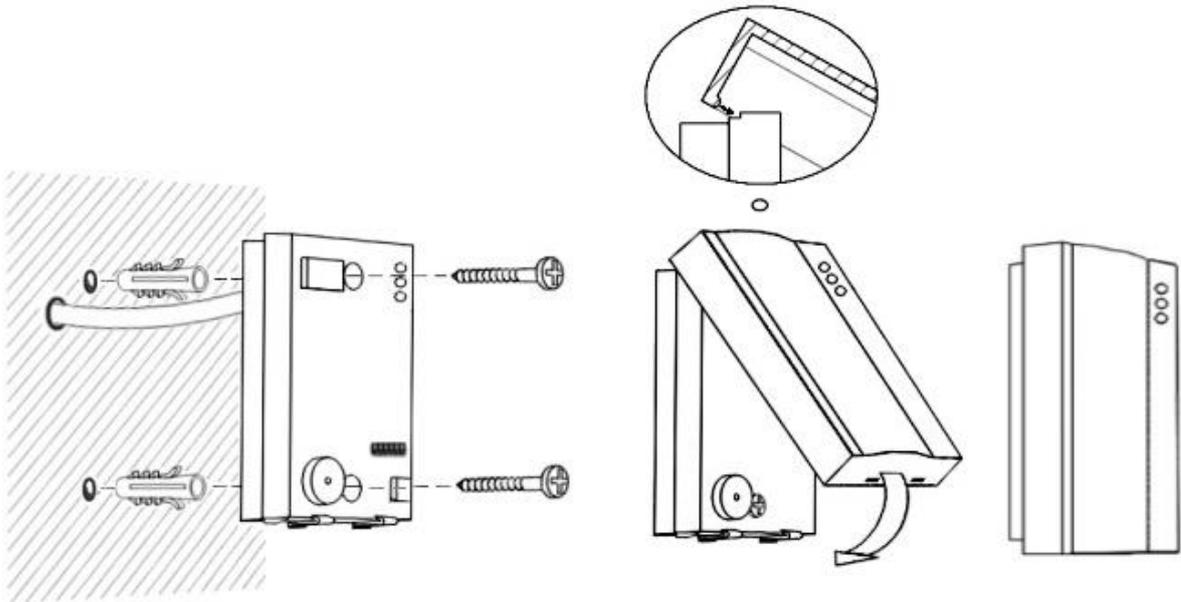

Nearby metal surfaces may cause a decrease in reading distance and speed. This is caused by the combined effects of parasitic capacitance and conductance.

Mutual disturbance of a couple of TECHFASS devices (standard 125 kHz system reader module + Wiegand output reader) can be avoided by setting up the reading synchronization (see reader configuration chapter). The synchronization is ensured by periodic sending of a special signal via Wiegand interface from the Wiegand output reader to the standard system reader module. There is no need to connect any other wires or make any special configuration on the TECHFASS system reader module.

4.5 Mounting and removal of the reader

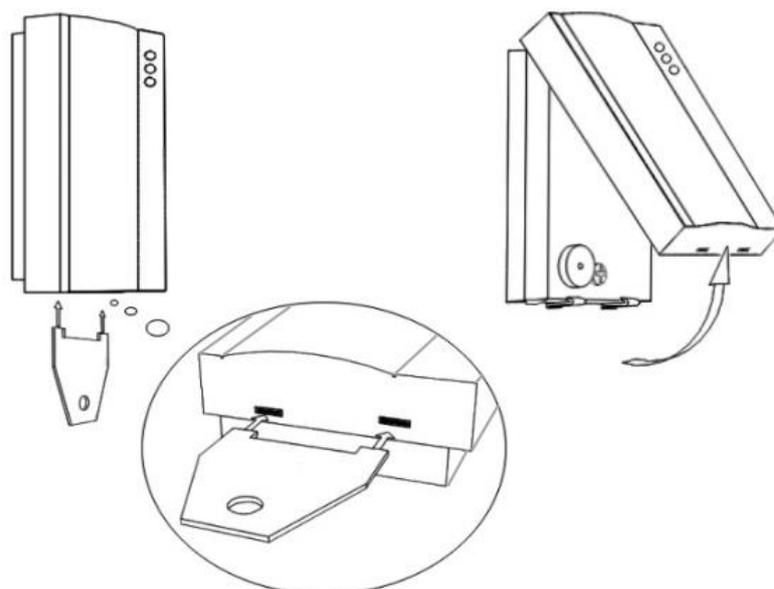

First fasten the base directly to the wall using two relevant fasteners, see *Pic. 4*. Then set the housing on the upper part of the base and rotate the housing until the both parts snaps down.

It is recommended to place an installation box for connection of incoming cables on the other side of the wall or in highly secured area (with in/out readers).

Pic. 4: Mounting of the reader module

Release the clamps using the enclosed key before dismantling the housing, see *Pic. 5*.

Pic. 5: Removal of the reader module

5 Reader setting and functioning

5.1 Operating test and control

After powering up the reader, it indicates preset *setting* (see *table 8*) by parallel *beeping* and *red LED flashing*. *Number* of beeps and flashes indicates the selected *setting type*. After that the *red LED* is active permanently. Reading a card is indicated with a flash of the *green LED* and a *single beep*. The card code is sent using the *WIEGAND output* in preset format. The *yellow / green LED* and *beeper* are active when putting the *0 V* signal to the relevant controlling inputs.

Reader configuration modes	Beeps count	WIEGAND protocol	LED control	Synchronization
	1x	42 bits	Yellow	No
	2x	42 bits	Green	No
	3x	42 bits	Yellow	Yes
	4x	42 bits	Green	Yes
	5x	26 bits	Yellow	No
	6x	26 bits	Green	No
	7x	32 bits	Yellow	No
	8x	32 bits	Green	No
	9x	44 bits	Yellow	No
	10x	44 bits	Green	No

Table 8: Reader configuration modes

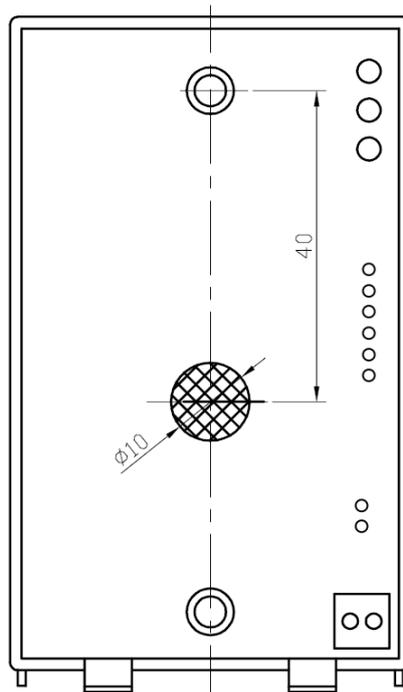

Note: WIEGAND 26bit (24 bits of code + start and end parity bit); WIEGAND 42bit (40 bits of code + start and end parity bit); WIEGAND 32bit (32 bits of code); WIEGAND 44bit (40 bits of code + 4 XOR parity bits); Yellow/green LED – selection of LED controlled by bringing 0 V signal to relevant input; Synchronization – cancels mutual disturbance of TECHFASS devices (standard 125 kHz system reader module + Wiegand output reader)

5.2 Changing reader configuration

For the change of the *reader configuration* connect the configuration device to the *C1 connector* (*pic. 3*). After the reader is restarted, the configuration mode is entered – it is indicated by *slow beeping* and *flashing* with *red LED*. The configuration is accomplished by *removing the device after the required number of beeps* (flashes), the meaning of the beeps count corresponds with the specifications from *table 8*. If the time for the configuration expires, the device must be removed and the reader restarted – in that case the configuration is not changed. After finishing the configuration *do not put the device back* to the connector!

6 Placing a magnet for tearing-off indication

Drill a \varnothing 10 mm hole 12 mm deep in a wall behind the reader module at designated place (*Pic. 6*). Insert a magnet (ordering number 51900200) and attach it in the hole with appropriate mastic to ensure the top surface of the magnet matches with the wall surface. Mount the reader module in formerly prepared holes mounted with plugs.

Pic. 6: Magnet placement
